“What are they spraying???”

There have been many questions regarding the sanitizer spray used by our housekeeping staff so we'd like to explain a little bit about it. It is a solution that comes in a tablet form, when mixed with water it becomes a powerful disinfectant and sanitizer that is safe for all surfaces, including fabrics. This solution is a milder alternative to bleach, with less negative effects, while still being effective against a broad range of microorganisms including C-Diff, norovirus and influenza. When used properly, this solution kills germs in less than 10 minutes, some in as little as one minute. In order for this to happen, however, the spray must be allowed to air dry. In addition, once the surface is dry, BruTabs will continue to kill new microorganisms for an extended period of time protecting even if it comes in contact with new germs. It is safe for skin, although harmful if ingested or in the eyes. However, if contact with skin occurs, it is recommended to wash the skin to avoid any chance of irritation. If you have any questions or concerns please ask to speak with Larry Shoenfelder, Director of Environmental Services.
